WORK EXPERIENCE

- **01/2018 - Current – BMG BANK**

  Analyst / Developer / Architect

  I am part of the team responsible for the design and development of the bank's digital account project. I am responsible for the orchestration between microservices (new features) and several legacy systems. Part of the challenge is adapt with safety web services that was made to work only on intranets to work in the internet.

  The automatization of the service's deployment is made using TFS in a CI/CD flow.

  2015 – 2017 – Upstairs
  Architect / Owner

  Architect responsible for designing the structure of systems using microservices hosted on Azure Web Sites and client mobile applications developed using Cordova. The deployment of microservices were made with CI/CD TFS Online flow.

  2010 – 2018 – Álamo TI
  Analyst / Developer / Architect / Team Leader

  Technical leader in a team of five developers. In this position I participated in a great part of the processes of the development of the main software of the company:

  - Definition of the architecture of the system, testing, deployment of systems on the production environment and maintenance of systems in production (DevOps)

- Responsible for modernizing an engineering system (currently written in **C #** using WindowsForms) used for companies such as Anglo American, CMOC and VSB. This modernization consisted of creating a **REST API** using **Asp.NET Core** to be consumed by applications developed using **Angular**.
